

# Food Mobile App (Burger Day) - Case Study

## 1. Project Overview

- ✓ Burger Day is a mobile food-ordering app designed to simplify how users discover, customize, and order delicious burgers.
- ✓ The goal was to create a fun, visually rich, and fast ordering experience with a clear focus on product imagery and minimal user steps.
- ✓ Burger Day is a focused, burger-first experience with bold visuals and a simplified interaction flow.

## 3. Solution

I designed Burger Day with a “fast-visual-ordering” approach:

- Hero food images on every screen
- Simple category filters
- One-screen customization (spicy, portion, addons)
- Reduced checkout to only one confirmation step
- Strong brand identity with red/white theme
- Smooth micro-interactions to make the app feel lively

The app focuses on quick scanning + quick ordering to keep users engaged.

## 2. Problem Statement

Food delivery apps today often suffer from:

- Overloaded home screens with too many categories
- Small, unclear food images
- Complicated customization steps
- Too many screens before checkout
- No personality or brand feel

For users who just want to quickly order a burger, the journey feels long, dull, and overwhelming.

This results in:

- Slower decisions
- Abandoned carts
- Poor user satisfaction

## 4. Result

- Users can make a purchase with 40–50% fewer steps compared to typical food apps
- Visual-first layout increases user appetite and confidence
- Improved clarity leads to faster decision-making
- Cleaner UX reduces friction and increases conversion
- A more delightful experience that feels modern and premium

Overall, Burger Day transforms a simple burger order into a fun, fast, and memorable user experience.

## 5. Target Users

Primary Users:

- Young adults (18-35)
- Quick decision-makers
- Food delivery users who prefer speed over complexity

Needs Identified:

- Easy browsing
- Clear pricing
- Quick customization
- Smooth and error-free checkout

## 6. Visual Style & UI Decisions

- ✓ Red + white theme: energetic, appetizing, and aligned with food brands
- ✓ Rounded cards: friendly and modern appearance
- ✓ Large product photography: builds trust and helps quick comparison
- ✓ Shadow and elevation: separates content and improves readability
- ✓ Consistent spacing: strengthens visual flow across screens

## 7. App Flow & Experience

### a. Splash Screen

A bold, high-contrast welcome screen featuring a hero burger.  
**Purpose:** Build visual appetite and introduce the theme.

### b. Home Screen

- Clear branding ("Burger Day")
- Search bar for quick access
- Category chips (All, Combo, Sliders, Classic...)
- Large burger cards with:
  - Image
  - Name
  - Rating
  - Favorite icon

Focused on visual clarity + immediate scanability.

### c. Product Details Screens

Each burger showcases:

- Full-size high-quality image
- Rating + preparation time
- Short product description
- Customization options:
  - Spicy level slider
  - Portion selector
  - Price indicator
- “Order Now” CTA highlighted with contrast

The layout ensures quick decision making with everything visible at once.

### d. Add-on Selection Screen

After selecting a burger:

- Users can choose multiple add-ons
- Price updates live
- CTA moves user to payment immediately

### e. Checkout Screen

Important details shown clearly:

- Order Summary
- Delivery time
- Payment method (Visa card pre-filled)
- “Pay Now” button

This maintains trust + frictionless purchase.

### f. Success Screen

A simple celebratory screen confirming the order with a green success badge.

**Purpose:** Increase user satisfaction and UX delight.

### g. Profile & Chat Support

- Profile screen with editable details
- “Edit Profile” and “Log Out” options
- Integrated chat support screen for quick assistance
  - This ensures users have transparent account control and support access.

## 8. Interaction Design & Motion(Prototype)

- Smooth scrolling
- Spicy slider interaction
- Add-to-cart micro-animation
- Card selection highlight
- Success screen fade-in
- Chat message bubble transitions

These subtle interactions elevate the overall feel of the app.

## 9. Final Outcome

Burger Day provides:

- ✓ A highly visual browsing experience
- ✓ Smooth interaction flow
- ✓ Fast and clean checkout
- ✓ Strong UX hierarchy
- ✓ Delightful motion and finishing elements

Overall, it transforms a simple “order a burger” action into a fun and enjoyable mobile experience.

## 10. Conclusion :

During this project, I learned how impactful strong visuals can be in guiding user decisions—clear, high-quality food images immediately increase user interest and confidence. I also discovered that simplifying the flow and reducing unnecessary steps significantly boosts conversion, as users prefer a fast, frictionless ordering experience. Additionally, presenting pricing clearly helps reduce hesitation, making the checkout process smoother. Finally, adding subtle motion and micro-interactions played a major role in enhancing user satisfaction, making the overall experience feel more responsive, modern, and enjoyable.
