

IRCTC Homepage Redesign - Case Study

1. Project Overview

- ✓ I redesigned the IRCTC homepage to make the ticket booking experience simpler and more user-friendly.
- ✓ The existing IRCTC interface contains a lot of text, multiple navigation links, and a large amount of visual noise.
- ✓ My goal was to create a cleaner layout that helps users quickly book tickets without confusion.

2. Problem Statement

- The original IRCTC homepage overwhelms users with too much information at once.
- Important actions like booking a train, checking PNR status, or exploring services get lost in the clutter.
- This affects usability, reduces clarity, and slows down the booking process.

3. Goals

- Reduce visual clutter and simplify the homepage
- Improve the hierarchy of information
- Make the booking card more intuitive
- Present services in a structured and accessible way
- Modernize the overall look and feel

4. User Personas / Flows

Since IRCTC users are diverse, the primary user flow I focused on was:

User Flow:
Open IRCTC → Enter journey details → Search trains → Book trains
Book Meals → Explore Touring Packages → Check PNR/ Refund Policy
Book/Check Availability → Hotels → Flight → Buses

I designed the interface to make this flow faster and distraction-free.

5. Visual Design (My Improvements)

Key design improvements:

- Clean and modern typography
- Soft color palette for a calm experience
- Service cards with icons for quick recognition
- Well-structured navigation
- Simplified booking form
- Balanced white space for readability
- Clear CTA buttons like “Search Trains”

6. Final Screens

Before :

- Overloaded with text
- Hard to locate the booking section
- No visual hierarchy
- Multiple distracting elements
- Outdated aesthetics

After :

- Clean hero section
- Structured booking card
- Clear headline and purpose
- Modern and visually appealing UI
- Easy navigation
- Organized services section

7. Conclusion :

This redesign helped me focus on simplifying a complex government interface. I learned how spacing, alignment, and hierarchy can greatly improve usability. The final result is a modern, clear, and user-friendly homepage that prioritizes the primary task: booking train tickets quickly.
